ABSTRACT

Term selection methodology used in the Subject Access Project is outlined in this manual. This project was designed to demonstrate how a card catalog in machine-readable form can be augmented to allow greater subject access to the information content of a library collection. Rules and regulations for selecting words from indexes and contents pages to supplement Library of Congress classification, subject headings, and title words are intended to insure selection of significant subjects and useful search terms. Procedures are presented for determining the usability of contents pages, selection of entries from the contents pages, and selection of entries from the index. Following these rules, words and phrases were selected for a sample library collection of approximately 2,000 titles, put into machine-readable form, and merged with the MARC-like records already available to create a new data base, BOOKS. Some comparison searching using MARC records alone was done on the Library of Congress SCORPIO system; separate reports document these trial searches. A flow chart of the selection procedure and sample pages are included in the appendices. (Author/KP)

- F. SAMPLE OF BOOKS DATA BASE ON ORBIT PRODUCED BY SAP/SU FOLLOWING SELECTION RULES

**** This page was printed on colored paper for easy referral.**

PREFACE

TO BEGIN... The Subject Access Project was supported by a grant from the Council on Library Resources in 1976-77. It was designed to demonstrate how a library card catalog, once converted to machine-readable form, could be augmented to allow greater subject access to the information content of a library's book collection. Words and phrases from the tables of contents and back-of-the-book indexes were selected for a sample library collection of approximately 2,000 titles from the University of Toronto Libraries' collections representing ten fields of the humanities and social sciences. The words and phrases from these books were selected following the rules in this manual; they were put into machine-readable form, and merged with the MARC-like records already available for these books in the UTLAS system. This newly created data base, called BOOKS, was made available on the System Development Corporation ORBIT retrieval system for librarians around the U.S.A. and Canada to search and to determine its usefulness for subject searching. Some comparison searching using MARC records alone was done on the Library of Congress SCORPIO system. Separate reports exist to document these trial searches.

If the idea of augmenting the subject descriptions of your book collection is appealing, we offer the preliminary edition of this manual for guidance. It is not the definitive answer to improved subject access in libraries, but at this moment in time, it appears to offer a way to begin.

We suggest you begin with a small portion of your book collection, one where you know the L.C. subject headings are especially inadequate.

Photocopy a few contents pages and indexes.

Apply the rules in this manual, underlining the selected words and phrases.

Consider what you now have for a given book, a subject description, perhaps several hundred words long. Would the terms be useful in an inverted file on an online retrieval system? If your answer is yes, you have begun.

The next step could be some cooperative effort where no library would input their descriptions for themselves alone, but would share the input effort with others as we now do via RLG, OCLC, BALLOTS and UTLAS, and via the cooperation of national libraries. When this comes, all could benefit, including all the users of our libraries.

There are many problems ahead, for not all titles have usable contents pages or indexes; there are many editions of a work, which to input; what to do about foreign language books, etc. Hurdles and problems there always will be, but the time to begin is now. A comparison between online searching of abstracting and indexing data bases and online searching of library catalogs today brings home how divergent the two are. Seekers of information deserve better from us.

Pauline Otherton

INTRODUCTION

The purpose of this project is to improve subject access to the content of books by augmenting subject descriptions in MARC records with words from the books' index or table of contents. With the tools now available, the subject of a book can be determined only through the L.C. classification, subject headings, and title words. This permits searching a broad subject area, but not specific aspects of a book's treatment of that subject. For example, we can search for information on ethics using the classification BJ (Philosophy-Ethics), the subject heading ETHICS, and words found in titles like Ethics, Origin and Development, Ethical Naturalism, New Studies in Ethics, A Modern Introduction to Ethics, etc. If we want more specific information on the role of conscience in determining morality and ethical judgment, we must go to the books themselves and check the index and/or contents for chapters or sections relevant to conscience and morality.

In this project, we have tried to bring out those specific subjects, like conscience and morality, which are "buried" in books. Using the tables of contents and indexes we have selected terms and phrases which point to the significant subjects discussed in the book. This information was arranged and processed so that someone can locate not only the books, but the specific pages within the book where that subject is discussed.

The rules and guidelines we have devised for selecting words from indexes and contents pages are intended to insure that both significant subjects and useful search terms will be extracted from the books. It is important that you read the rules and study the examples carefully to understand the criteria for selection, for few indexes or contents pages are similar. Each book will pose a seemingly difficult problem for your selection decision. We hope our analysis of the characteristics of indexes and tables of contents will help you make the best selection decision which will be cost effective for input to machine-readable bibliographic data bases (see Appendices D-F) and beneficial to the users of online search and retrieval systems.

HOW TO USE THIS MANUAL

- Step 1. Read the entire manual through to become familiar with the terminology and general principles used in the selection of entries from indexes and tables of contents. Study the examples which illustrate varieties of styles and arrangements used in indexes and tables of contents.
- Step 2. Scan the book you are about to process. Get a general idea of the subject matter and note frequently used terms in title, subject headings, contents or index entries. (If you are also doing original cataloging of the book, you have probably already done this.)
- ~~Step 3.~~ Depending on the existence of a table of contents, index or both, turn to that section of the manual which contains the appropriate selection rules.
- a. Where both a table of contents and index exist, begin with Part I to determine the "usability" of the table of contents. If the table of contents meets these criteria, proceed to Part II for selection of entries. If it is not acceptable, turn to Part III and begin selection from the index.
 - b. Where only a table of contents exists, begin selection with Part II.
 - ~~c. Where only an index exists, begin selection with Part III.~~
- Step 4. Make selections until either all selection rules are applied, or a quota of selections is reached. See Appendix B for the use of quotas with the SAP formula. If you choose to substitute a different quota formula, you will still use the same selection procedures outlines in this manual, ending selection when the assigned quota is met.
- Step 5. Format the selections for computer input. See Appendix D for examples of how we formatted selections. The style you choose will depend on the features of the retrieval system you will use for online searching.

I. PROCEDURES FOR DETERMINING "USABILITY" OF TABLE OF CONTENTS PAGES

- **Procedure:** Apply the following rules as directed in the order listed. The table of contents must satisfy all of the rules to meet the criteria of "usability." If the table of contents clearly fails to meet any one rule, you should choose the index and go to Part III of the manual to begin selection of the index. However, because these rules entail subjective judgments, there will be cases where the usability of the table of contents cannot be easily decided. If you are unsure as to its usability, the table of contents should be treated as a difficult choice and a comparison with the index will be necessary. The procedure and rules for this comparison are contained in Section I.B. Finally, Section I.C. includes several examples of usable tables of contents.

A. RULES FOR CHOICE OF TABLE OF CONTENTS OR INDEX

Rule I.A.1: Choose a table of contents which contains at least one heading (chapter, section or subheading) for every 25 pages of text. Do not count Introduction, Foreword, Bibliography and other headings included in the Stop List (See Appendix A for a complete list of Stop terms).

EXAMPLE: De Stijl

NK (Art Applied to Industry
Decoration & Ornament)

No subject headings

Contents

Introduction 7

- 1 The international background 16
- 2 The Dutch background 36
- 3 De Stijl: development and ideals 57
- 4 De Stijl: achievements 95
- 5 Conclusions 148

Acknowledgements 164

Index 166

The book contains 165 pages of text (determined by taking one page lower than the page printed for the index). Excluding Stop List headings, there are only four headings, yielding an average of one heading per 41 pages of text. This table of contents does not satisfy this rule.

Rule I.A.2: Choose a table of contents which contains content-bearing headings and not "cute phrases" or "headliners." Content-bearing headings and terms should be indicative of the subject of the book.

EXAMPLE: Georgian Bay, The
Sixth Great Lake

F5545 (Post Confederation
Ontario History)

Georgian Bay Region - History
Ontario - Social Life and Customs

Contents

Prologue / 3
Huron harvest / 7
Highway to the west / 19
1812 / 29
Penetanguishene / 38
Red land and white / 48
The bay develops / 64
The falling of the pine / 81
Canoes, sails, and fishing craft / 94
The first steamers / 112
The fleets come—and go / 128
The pleasure-seekers / 147
Today / 158
Abbreviations / 168
Bibliography and notes / 168
Index / 182

The majority of these headings are vague "headlines" or "cute phrases" which are not clearly related to the subject of Canadian history. With few content-bearing headings, it fails to meet this rule.

Rule I.A.3: Choose a table of contents which does not contain a significant amount of repetition.

EXAMPLE: The Little World of Man

BF (Psychology)

Psychology - History
English Literature - Early Modern - History
and Criticism

CONTENTS

I. INTRODUCTION	page 9
II. THE SOUL	29
III. THE BODY	52
IV. THE BODY'S EFFECT ON THE SOUL	82
V. THE SOUL'S EFFECT ON THE BODY	119
VI. CONCLUSION	145
NOTES	150
BIBLIOGRAPHY	178
INDEX	183

The headings in this table of contents are extremely repetitive. Note that there are only two subject-related terms, soul and body, repeated throughout the four headings. This example also fails to meet Rule I.A.1.

Rule I.A.4: A table of contents with many unpagged headings should be treated as a difficult choice and must be compared with the index. Turn to Section I.B., Rules for Difficult Choices.

9

.B. RULES FOR DIFFICULT CHOICES

- Procedure: When the "usability" of a table of contents cannot be easily decided, it should be treated as a difficult choice and a comparison with the index will be necessary. Difficult choices may include tables of contents with the following characteristics:
 - the headings are partially content-bearing
 - it contains a questionable amount of repetition
 - the number of headings falls just short of the required one for every 25 pages of text
 - it contains many unpagged headings

In comparing the index with the table of contents, you should choose the index only if it satisfies both of the following rules. If the index does not meet one or both of these criteria, you should choose the table of contents.

Rule I.B.1: The index must contain locators with page ranges. An index with "ff," "et. seq." or single page locators should not be chosen over a difficult choice table of contents (See III.A. for definitions of page ranges).

Rule I.B.2: The index must include ample subject terms, other than names and places. Look for subject terms which appear in the table of contents. If these terms do not appear in the index you should choose the table of contents.

An example of a difficult choice table of contents and index follows. In this example, the table of contents contains many unpagged headings and, as explained in Rule I.A.4, it must be compared with the index. This index meets both criteria for difficult choices. It contains many locators with page ranges and numerous subject terms. Note that the index includes subject terms which are also contained in the table of contents, e.g., Countryside, Agronomists, Property rights, Mining. This index should be chosen for selection.

I.C. EXAMPLES OF TABLES OF CONTENTS WHICH MEET ALL CRITERIA FOR "USABILITY"

The following examples illustrate tables of contents which contain:

- 1) Sufficient number of headings (at least one per 25 pages of text)
- 2) Content-bearing headings related to the book's subject
- 3) No excessive repetition
- 4) Minimum amount of unpaged headings

EXAMPLE: Zulu Tribe in Transition; GN (Anthropology)
The Makhanya of Southern Natal
 No subject headings

II. PROCEDURES FOR SELECTION OF ENTRIES FROM TABLES OF CONTENTS

A. STYLING LOCATORS AND RANGES FOR TABLES OF CONTENTS

- Procedure: Determine the entries -- chapters, sections, subheadings -- which cover a range of five or more pages. (See Part III for definitions of range and length of range.)

Beside the page locator for these headings, add the range according to the following conditions:

1. When ALL headings in Contents Table are paged:

- Procedure: The range for chapters is determined by one page lower than the page number printed for the next chapter. The range for subheadings of chapters is likewise determined by one page lower than the page number printed for the next subheading.

<u>EXAMPLE:</u>	Chapter II.	The Organization of Personality	15-30
		1. The Id	15-20
		2. The Ego	21
		3. The Superego	25-30
	Chapter III.	The Dynamics of Personality	31-64
		1. Psychic Energy	31
		2. Instinct	32-38
		3. Cathexis and Anti-Cathexis	39-50
		4. Consciousness	51-64
	Chapter IV.	Repression	65-79
	Index		80

Note: For the last subheading in each chapter you will take one page lower than the page printed for the next chapter -- as is done for "superego" and "consciousness."

2. When all headings are NOT paged:

TYPE 1: Sections are not paged, chapters or subheadings are.

- Procedure: Determine the range of unpagged sections by taking the page location of the next immediate heading and the preceding page of the first heading in the next comparable section.

<u>EXAMPLE:</u>	Part I.	Group Processes	7-134 (full paging added)
		1. Social Interaction	7-29
		2. Social Control	30-61
		3. Roles	62-134
	Part II.	Interaction Process	135-239 (full paging added)
		1. Personality	135-165
		2. Social Traits	166-189
		3. Group Size	190-239
	Part III.	Performance	240-273 (full paging added)
		1. Productivity	240-273
	Index		274

TYPE 2: Chapters or sections are paged, subheadings are not.

- Procedure: Do not add ranges for these subheadings. Further directions will be discussed in Part II.C.

3. Examples of stylistic variation in contents tables.

In determining appropriate ranges for headings, careful attention must be paid to the styling of the contents table. The following examples illustrate the three most common styles used to distinguish the hierarchy of headings. Be sure you understand the reasons for choosing added ranges in each example. Arrows designate appropriate headings from which ranges were taken. Ranges are added for all headings, including those with less than 5 pages, to serve as examples.

- a. Tables of contents in which all headings are numbered or lettered:

EXAMPLE:

III.	PROJECTIONS TO 1970	25-53
	A. Expenditures	25-40
	1. Public water utilities	26-31
	2. Public sewerage facilities	32-35
	3. Other sanitation	36-40
	B. Revenues	41-53
	1. Current charges	41-45
	2. Federal grants-in-aid	46-53
APPENDIX -	Explanatory Statement on the Study of State-Local Finances in 1970	54

- b. Tables of contents with indentation instead of complete numbering:

EXAMPLE:

II. BUSINESS TAXATION IN THE SUBNATIONAL ECONOMY . . .	6-30
Definitions: Value Added and Comparisons with	
Alternative Tax Bases.	7-13
Value Added	7-10
Gross Receipts (Sales).	11-11
Net Income (Profits).	12-12
Summary	13-13
Why a General Tax on Business?	14-15
Criteria for Choosing the Tax Base	16-19
The Ability Criterion	17-17
The Benefits Criterion	18-19
The State Levied VAT: Some Principles	20-27
Origin Principle.	21-22
The Income Variant.	23-24
The Subnational VAT and the Retail Sales	
Tax: A Comparison	25-27
APPENDIX: A REVIEW OF SUBNATIONAL VALUE ADDED	
TAX PROPOSALS IN THE UNITED STATES	28-30
III. TAX YIELD, IMPACT AND RESPONSIVENESS	31

Note that although the APPENDIX is in bold type, like the chapters, it is indented in line with subheadings, not chapters. It is therefore treated as a subheading.

- c. Tables of contents with bold or upper case type face, instead of indentation or numbering:

EXAMPLE:

Foreword	vii
1. Introduction	1-6
FEATURES OF THE U.S. TAX SYSTEM 1-4	
GOALS OF TAXATION 5-6	
2. Taxes and Economic Policy	7-31
STABILIZATION POLICY 8-22	
Impact of Expenditure and Tax Changes 10-10	
Built-in Stabilizers 11-13	
The Full Employment Surplus 14-17	
Expenditure versus Tax Adjustments to Promote Stability 18-20	
Automatic Budget Rules 21-22	
POLICIES TO PROMOTE ECONOMIC GROWTH 23-29	
Achieving Full Employment and Stable Prices 23-23	
Raising the Growth Rate 24-26	
The "Debt Burden" 27-28	
SUMMARY 30-31	
Index	

.B. RULES FOR SELECTION AND UNDERLINING HEADINGS WITH RANGES OF 5 OR MORE PAGES

- Procedure: Select and underline headings with ranges of 5 or more pages according to the following rules:

Rule II.B.1: Do not underline "a", "an", or "the" unless essential for meaning.

Rule II.B.2: Underline headings which are content-bearing and clear indicators of the book's subject. Do not underline headings which resemble "headlines" or "cute phrases."

EXAMPLE: Canoes, Sails and Fishing Craft
The First Steamers
The Fleets Come and Go
The Pleasure-Seekers
Today

Rule II.B.3: Where a heading includes a mixture of content and non-content bearing terms, underline the portion with the content-bearing terms. Non-content bearing parts of headings may be headlines, rhetorical phrases or interrogative words.

EXAMPLE: Children's reactions to helpers: Their money isn't
 where their mouths are
 What it really is
Axiom: What it really is
 Is the sylllogism a petitio principii?
 Why there are deductive sciences

Rule II.B.4: Do not underline the following headings, even if they cover ranges of five or more pages:

STOP LIST TERMS:

Abbreviations
 Acknowledgements
 Bibliography
 Conclusion
 Discussion
 Epilogue
 Exercises

Foreword
 General Considerations
 Glossary
 Illustration
 Index
 Introduction
 Notes, Note on...

Plates: List of...
 Preface
 Problems
 Readings: List of...
 References
 Summary
 Tables

Rule II.B.5: Where one of the above terms occurs with other content-laden terms, it is not considered a stop list term and the heading should be underlined.

EXAMPLE: (1) Introduction to Theories of Social Change
(2) Appendix: Collective Guilt
(3) Appendix: Christianity as Millenarian Cult
(4) Bibliography of Readings
(5) Exercises and Problems

In the above example, (4) and (5) do not contain other subject-related terms and should not be selected and underlined.

Rule II.B.6: Underline terms from among the section headings, chapter headings, and chapter subheadings if the concept or term hasn't already been selected with inclusive paging indicated.

EXAMPLE: Values, Rights and Obligations 20-43
The Grounding and Selection of Values 21-27
Values and Rights 28-43
Obligations 36-43

(repetitive of terms in chapter heading with inclusive paging.)

Rule II.B.7: Do not underline headings if you would have to add terms to the headings to supplement or clarify the meaning.

EXAMPLE: A Lost Consensus (no reference, vague)
A Comprehensive and Common-Sense Approach (no reference, vague)
What are the Causes of the Crisis? (unclear)

Rule II.B.8: Where headings in a contents table consist of multiple-authored articles, readings, etc., select and underline the title according to the previous rules. Select and underline the author for all headings of five or more pages. Thus, an author may be underlined even though the title of his/her article is not.

EXAMPLE: Human Society Before the Urban Revolution, Robert Redfield 35-40
The Legacy of Sumer, Samuel Kramer 46-50
What Hunters do for a Living or How to Make Out on Scarce
Resources, Richard B. Lee 51-64

II.C. RULES FOR SELECTION AND UNDERLINING ADDITIONAL ENTRIES

- Procedure: Count the underlined headings and check to see if the quota has been reached (see Appendix B on use of the quota). If the quota has been reached, stop selection and mark near the quota on the top sheet for the book the number you have selected. If additional selection is still to be made, make selections in the following order of priority until quota is reached.

Rule II.C.1: Where a table of contents has unpagged subheadings: Consider subheadings a continuation of the chapter heading. Review subheadings for additional terms and underline terms which satisfy the preceding rules. In addition, do not underline terms which are repetitive of terms in the chapter heading.

<u>EXAMPLE:</u>	1. <u>Propositional Logic</u>	3-46
	1.1 <u>Operators and Connectives</u>	4-13
	<u>Propositions, Truth-Functional Operators</u>	
	<u>Conjunction, Negation, Equivalence</u>	
	1.2 <u>Tautologies, Contradictions and Contingents</u>	14-21
	<u>Logical Forms of Propositions, Substitution</u>	
	<u>Instances of the Logical-Forms</u>	
	1.3 <u>Equivalences</u>	22-46
	<u>Tautology, Negation of a Negation,</u>	
	<u>Useful Equivalences</u>	

Rule II.C.2: Where there is an index: Go to that section of the manual containing rules for the particular type of index. Select entries according to the rules until the quota is reached. In addition, do not underline entries which repeat terms already selected from the table of contents.

II.D. EXAMPLES OF TABLES OF CONTENTS WITH SELECTIONS UNDERLINED AND RANGES ADDED

In the following two examples, headings which satisfy the preceding selection rules are underlined with page ranges. Reasons for not selecting headings are given in parentheses.

EXAMPLE: The Mound Builders: Agricultural Practices, Environment and Society in the Central Highlands of New Guinea

GN (Anthropology)

Enga (New Guinea people)
Agriculture, Primitive
Anthropo-geography - New Guinea (ter.)

III. PROCEDURES FOR SELECTION OF ENTRIES FROM INDEX

A. DEFINITIONS

ENTRY

An entry is a term, two terms, or phrase in an index followed by locators or pages on which the term or phrase is discussed in the book.

Single line entries:

EXAMPLE: Psychological forces in nature, 116-121, 154
 Psychology, 10-14, 16, 20
 Repression and defense mechanisms, 214ff

Entries may be subheaded with another set of terms or phrases and locators which relate to or qualify the entry. Subheadings usually take two forms: list or paragraph.

EXAMPLES:List

Entry: Lumbering, 18-39
 dress, 18
 living conditions, 20
 sawed lumber, 25
 squared timber, 27-30
 technique, 35-36

SubheadingsParagraph

Entry: Buddhism, 104; origins, 16;
 transmission to Japan, 17-20;
 monasteries, 21, 22; influence
 on dance, 41-45; philosophy of,
 120, 136-138; religious texts
 of, 26-28.

Subheadings

"Lumbering" and "Buddhism" are entries with subheadings. Subheadings can be distinguished by the indention for the list or paragraph following. In the list form, each subheading begins a new line. In the paragraph, subheadings are separated by semi-colons after the locators. Under "Lumbering" there are five subheads and under "Buddhism" there are six.

Variations in Subheaded Index Entries:

~~The examples above illustrate two general types of subheaded entries. You should be aware of stylistic variations which make it more difficult to distinguish entries from subheadings.~~

a. In the following example the first subheading is not indented. You can determine that "conflict within" is not part of the entry because the subsequent subheadings would not make sense, if read with "city planning department, conflict within."

EXAMPLE: City planning department, conflict within,
186-197, 233-235, 324,
coordination within, 210-219,
organizational structure of, 164-170,
salaries in, 168, 179

- b. Some entries are sub-subheaded. Sub-subheads are usually distinguished by indention, punctuation or type face. If a sub-subhead qualifies for selection, you should underline the subhead, and the entry under which the sub-subhead is listed.

EXAMPLE: Economic, activity, - spatial distribution of,
84-94; development, 107-111, 128; - and
decentralization, 247; - local, 256; -
and maritime transport, 84-85; growth,
9, 13, 230; - balanced, 261; integration
- continental, 73-75; - multi-national,
46-58

Note: In this example the entry is "Economic," and the subheads are "activity," "development," "growth," and "integration." All others are sub-subheads preceded by hyphens.

EXAMPLE: Zoning, 15;
bulk zoning, 137
envelope zoning, 146
relationship to property values, 18, 80
zoning bonus, 10, 30, 145
 additional density, 34, 148
 in Chicago, 100
 digestion rationale, 34

Note: Indention in this example clearly distinguishes sub-subheads under zoning bonus.

LOCATOR

Another way of saying page. A locator can be a range, a single page, a page followed by "ff," "et. seq.," "n" (footnote), or passim.

In counting page totals for locators, you will count every page, regardless of the abbreviations or ranges.

RANGE

A range of pages is designated by two numbers separated by a hyphen. "22-27," "13-14," "105-176," are all page ranges.

The length of a range is determined by counting the beginning and ending pages, and pages between. Thus, "22-27" is actually a range of six pages -- 22, 23, 24, 25, 26, 27 -- and not five -- 27 minus 22. To count the ranges quickly and easily, subtract the lower number from the higher number and add one. Thus 27 minus 22 equals 5 plus one equals six.

Consecutive pages separated by commas and not a hyphen are not ranges: 28, 29, 30, 31, 32 is not a range. But 28-32 is a range.

"f", "ff" and "et. seq."

These abbreviations follow locators and stand instead of ranges. They indicate the subject continues over several pages, without giving the ending page. Usually, an index with "ff" will use "f" to indicate the subject goes only to the next following page. Indexes with "et. seq." usually do not have a designation for the next following page. Occasionally an index will use only "f". It stands instead of "ff" or ranges and should be treated as an "ff" locator.

III.B. EXPLANATION OF STEPS IN SELECTION PROCEDURE FOR ALL INDEXES

Step 1. Read the preceding section of definitions for characteristics of indexes.

Step 2. Scan the index in front of you to determine the predominant characteristics of that index. On the basis of this scanning, classify the index by one of the following types:

Index with page ranges

Index with no ranges, but with "f", "ff", "et. seq." designators

Index with no ranges, no "f", "ff", etc. (All other indexes)

Step 3. Go to that section of the manual which contains rules for the type of index to be selected:

III.C. Indexes with Page Ranges

III.D. Indexes with "f", "ff", "et. seq."

III.E. All Other Indexes

Step 4. For all types, begin selection with the first rule of that section. After each rule is applied and entries selected, count the number of entries underlined as follows:

a. Count each entry or each subheading as one selection.

EXAMPLE:

Total = 6	{	<u>one</u> = <u>Chicago</u> , 18, 20-21, <u>118-129</u> , <u>146-152</u> .
		Cognitive skills, 18-20.
		<u>one</u> = <u>Communications</u> , 25-26, 57-59, 67, 73, 89-91, 106.
		<u>four</u> = <u>Community</u> , <u>politics</u> , 313-318, <u>356-362</u> <u>power studies</u> , 46-48, <u>387-391</u> <u>studies</u> , 22, 178, <u>195-200</u> .

b. Check your total against the quota indicated for your book. If you have reached the quota (see Appendix B), STOP. If quota has not been reached, proceed to the next rule, count again, and so on until quota is reached. If you complete all rules for that section and quota is still not reached, STOP, marking near the quota on the top sheet for the book, the number you have selected.

III.C. RULES FOR INDEXES WITH PAGE RANGES

- **Procedure:** Apply the following rules as directed in the order listed. Where any of these rules applies to a subheading, remember to underline the subheading as directed. In addition, you must always underline the entry under which the subheading is listed.

As you apply each subsequent rule, avoid selection of entries which duplicate entries previously selected for the same index, even where the entry satisfies the rule being applied. Thus, if you have selected the entry "government, local, 105-112," do not select the entry "local government, 105-112." Try to avoid as much duplication as possible but do not spend all your time going back through the index. Your selections will be edited for duplication before input.

Rule III.C.1: Select and underline all entries and locators with chapter designators for locators.

Rule III.C.2: Select and underline all entries and locators where locators have bold-face type that refers to text (not illustrations or plates). These entries usually indicate important subjects of the book.

Rule III.C.3: Select and underline all entries and locators where locators include page ranges of 5 or more pages.

EXAMPLE: Social Characteristics, 206-233, 246-255, 304-306
Social Interaction, 67-70
 and attitude change, 287-288
 and decision process, 62-100, 105
Social perception, 79-100
 accuracy, 82-85
 of leader, 89-96
Sociometry, 8, 23-25, 407-411

Note: The locators following "social interaction" are not underlined since they are less than five pages. "Social interaction" is underlined because it is the entry for the subheading "decision process" which has a page range of 39 pages.

Note: Occasionally "passim" is used with ranges, chapters or bold face locators. When "passim" is used with locators which qualify for selection based on rules 1-3 above, underline as directed and include "passim" in underlining.

EXAMPLE: Indian Wars, Chap. 10, 11, 12 passim
Iroquois, 25-36 passim, 40-42.

Rule III.C.4: Select and underline all entries with 5 or more subheadings regardless of page ranges or totals. Do NOT underline locators.

EXAMPLE: Behavior, 10
 expressive, 22-24
 instinctive, 106
 learned, 25-27
 modal, 96
 social, 37-39

} 5 subheadings

Rule III.C.5: Select and underline all entries with a total of 10 or more page references, not necessarily ranged. The total is determined by counting page references for a single entry, or a single subheading, but not counting page references for all subheadings under an entry. Do NOT underline locators.

EXAMPLE:

<u>Books</u> , 3,7,10,124,127,301,304,306,321,346	Total pages = 10	Select
<u>Animals</u> , 21-23,45-47,58,104,107,201-204	Total pages = 13	Select
<u>Character analysis</u> , 15-17,20-23,28,30,32,50-52	Total pages = 13	Select
Character disorders, 20-23,26-28	Total pages = 7	Do not select
Character neuroses, 110-112	Total pages = 3	Do not select
<u>Unconscious</u> , 81,83-85	Total pages = 4	Do not select alone
activity, 113,115	Total pages = 2	Do not select
forces, 10,12-14	Total pages = 4	Do not select
<u>processes</u> , 120-123,127,129,130-132,138	Total pages = 11	Select

Note: "Unconscious" is underlined because it is the entry with the subheading "processes" which is selected.

Remember, NO locators are underlined following this rule.

Note: If you are finding more candidate entries than the quota will allow, you may have to

- (1) raise the minimum page range in Rule III.C.3 from 5 to 7 or more pages and/or
- (2) raise the number of page references in Rule III.C.5 from 10 to 15 page references.

STOP

III.D. RULES FOR INDEXES WITH NO PAGE RANGES BUT WITH "F", "FF", "ET. SEQ."

- Procedure: Apply the following rules as directed in the order listed. Where any of these rules applies to a subheading, remember to underline the subheading as directed. In addition, you must always underline the entry under which the subheading is listed.

As you apply each subsequent rule, avoid selection of entries which duplicate entries previously selected for the same index, even where the entry satisfies the rule being applied. Thus, if you have selected the entry "government, local, 105-112," do not select the entry "local government, 105-112." Try to avoid as much duplication as possible but do not spend all your time going back through the index. Your selections will be edited for duplication before input.

Rule III.D.1: Select and underline all entries and locators with chapter designators.

Rule III.D.2: Select and underline all entries and locators where locators have bold-face type that refers to text (not illustrations or plates).

Rule III.D.3: Select and underline all entries and locators where locators include page ranges of 5 or more pages.

Note: Index should be predominantly the type with "ff", but may contain a few ranges. Remember, if "passim" is used with locators which qualify for selection based on rules 1-3 above, underline as directed and include "passim" in underlining.

Rule III.D.4: Select and underline all entries with 5 or more subheadings. Underline the entry only without locators.

EXAMPLE: Axioms

and experimental truths, 150, 162, 169f
 of arithmetic, 167
 of geometry, 147f
 of reasoning, 116, 118
 of the uniformity of nature, 181

5 subheadings = select

Rule III.D.5: Select and underline all entries with 10 or more page references. Underline the entry without locators. As in indexes with ranges, total is determined by counting page references for a single entry or a single subheading.

EXAMPLE: Paul, St., 133,135,149f,161,168,169,180f,199,201f,206.
(Total pages = 10 = Select)

Inference, 9,11f
improper, 131,134,135,178,179,185f,304,306,309,311.
(Total pages = 10 = Select)

test of, 160,165f

Rule III.D.6: Select and underline all entries and locators followed by "ff" or "et. seq."

EXAMPLE: Moral sciences, 307ff, 414ff, 426 EXAMPLE: Analogy, 29 et. seq., 76
Names, 13, 16
 categorical, 19
 collective, 21, 15f
 concrete and abstract, 226ff
Nature, 294ff, 306ff, 308
 human, 309ff
 laws of, 186f
Reasoning, 7, 109ff
 theory of, 307
Animals, 23
Approbation, 106 et. seq.
Virtue, 2, 129
 social, 47 et. seq., 146

Rule III.D.7: If quota is not reached, lower the number of page references in Rule III.D.5 from 10 to 5 page references.

STOP

III.E. RULES FOR INDEXES WITH NO RANGES AND NO "F", "FF", OR "ET. SEQ." (ALL OTHER INDEXES)

- Procedure: Apply the following rules as directed in the order listed. Where any of these rules applies to a subheading, remember to underline the subheading as directed. In addition, you must always underline the entry under which the subheading is listed.

As you apply each subsequent rule, avoid selection of entries which duplicate entries previously selected in the same index, even where the entry satisfies the rule being applied. Thus, if you have selected "government, local, 105-112," do not select the entry "local government, 105-112." Try to avoid as much duplication as possible but do not spend all your time going back through the index. Your selections will be edited for duplication before input.

Rule III.E.1: Select and underline all entries and locators with chapter designators.

Rule III.E.2: Select and underline all entries and locators where locators have bold-face type that refers to text (not illustrations or plates).

Rule III.E.3: Select and underline all entries and locators where locators include page ranges of 5 or more pages.

Note: Index should be predominantly the type with no "ff", but may contain a few ranges. Remember, if "passim" is used with locators which qualify for selection based on rules 1-3 above, underline as directed and include "passim" in underlining.

Rule III.E.4: Select and underline all entries with 5 or more subheadings. Underline the entry only without locators.

EXAMPLE: Virgin birth, 100

Six dogs born to Ainu virgin, 104

Twins born to Ainu virgin, 105

5 Subheadings = Select

Virgin birth and Christian faith, 90

Virgin birth a universal concept, 91,95,97

Virgin-born child in form of snake, 82

Rule III.E.5: Select and underline all entries with a total of five or more locators. Underline the entry only without locators.

EXAMPLE: Character analysis, 14,103,106,107,158,159 Total pages = 6 = select
 Character disorders, 230,231,232
 Character neuroses, 188,190,192,194
Character structure, 63,64,65,67,72,77,86 Total pages = 7 = select
Unconscious, 81,83 5 subheadings = select
 ———activity, 113
 forces, 7
 image, 25,26
 memories, 10
processes, 55,56,57,64,85,93,94 Total pages = 7 = select

Note: In the above example, "unconscious" would have been selected by Rule III.E.4, having five subheadings; "processes" is selected as an entry with more than five locators.

EXAMPLE: Oedipus, 23, 275
 period, 96
 myth, 32,101,161,164,187

Note: In this example the entry "Oedipus" is underlined because its subheading "myth" contains 6 locators.

Rule III.E.6: Where five consecutive entries begin with the same word or root and all relate to a common concept, underline the word or root as you would an entry with five subheads. Underline the term without locators.

EXAMPLE: Suburbs, 13
 Suburban industry, 17
 Suburban phenomena, 37
 Suburban self-government, 123
 Suburban shopping, 18
 Suburbanization, nature of, 37

Housing Act of 1968, 114
 Housing and Urban Development, Dept. of, 114, 120
 Housing choices, 124
 Housing patterns, 76
 Housing problems, 77

But do NOT select entries which, although beginning with the same word, are not related to a common concept.

EXAMPLE: New communities, 113
New Deal, 18
New Haven, Conn., 86
New Jersey, population density, 35
New systems, 43, 48

Rule III.E.7: If quota is still not reached, lower the number of subheads in Rule III.E.4 from 5 to 3, and/or lower the number of consecutive entries in Rule III.E.6 from 5 to 3.

STOP

F. QUICK REFERENCE SHEET OF RULES FOR INDEX ENTRY SELECTION

ALL INDEXES

1. Always select and underline entries and locators with chapter locators.
2. Always select and underline entries and locators where locators have bold-face type that refers to text.
3. Where a subheading is selected and underlined, always underline the entry under which the subheading is listed.
4. Always underline passim when it occurs with locators which qualify for selection.

INDEXES WITH RANGES

1. Select and underline all entries and locators where locators include page ranges of 5 or more pages.
2. Select and underline all entries with 5 or more subheadings. Do not underline locators.
3. Select and underline all entries with a total of 10 or more page references. Do not underline locators.

INDEXES WITH "F", "FF", "ET. SEQ."

1. Select and underline all entries and locators where locators include page ranges of 5 or more pages.
2. Select and underline all entries with 5 or more subheadings. Do not underline locators.
3. Select and underline all entries with a total of 10 or more page references. Do not underline locators.
4. Select and underline all entries and locators followed by "ff" or "et. seq."

ALL OTHER INDEXES

1. Select and underline all entries and locators where locators include page ranges of 5 or more pages.
2. Select and underline all entries with 5 or more subheadings. Do not underline locators.
3. Select and underline entries with a total of 5 or more page references. Do not underline locators.
4. Where 5 consecutive entries begin with a common word or root, select and underline the word or root as you would an entry with 5 subheads. Do not underline locators.

APPENDIX B

USE OF QUOTAS WITH SAP FORMULA

The selection rules contained in this manual are intended to ensure a progressive selection of entries beginning with the most significant entries -- those covering a large page range or containing many subheadings -- and ending with the less significant entries -- those covering fewer pages. The variety of selection rules is necessitated by the varying quality of indexes and tables of contents. Because of this lack of standardization in the arrangement of entries and locators, each index or table of contents will yield a different number of selections. The quota was devised to control the quantity of selection and maintain a data base of manageable size which would reflect the major contents of the monograph.

QUOTA FORMULA

Quota formula for monographs with tables of contents and indexes, or indexes only:

- (1) For each subject field, the average number of table of contents entries per monograph in the class and average number of possible index entries per monograph are computed.
- (2) A ratio (R) of the two averages is then calculated:

$$\frac{\text{average index entries per monograph in class}}{\text{average table of contents entries per monograph in class}} = R,$$

the relationship of the table of contents to the index.

- (3) This R is then used as the divisor to calculate the quota for each monograph by dividing the number of index entries in it by R:

$$\frac{\text{Total number of index entries in monograph}}{R} = \text{"quota" of entries to be selected} = Q$$

EXAMPLE:

For (Anthropology) LC Class GN

average index entries per monograph = 862.79 entries
average table of contents entries = 61.88 entries

$$(1) \text{ Ratio: } \frac{862.79 \text{ index entries}}{61.88 \text{ table of contents entries}} = 14 = R$$

- (2) Quota for monograph with LC call number GN34.3.M3E95:

number of index entries = 416

$$\text{quota} = \frac{416}{14} = 30 = Q$$

Quota formula for monographs with tables of contents only:

- (1) For each subject field, the quotas determined by the above formula are averaged:

$$\frac{\text{Total average of quotas in class}}{\text{Number of items with quota in class}} = \bar{Q} \quad (\text{Average quota for class})$$

- (2) \bar{Q} is assigned to each monograph containing only a table of contents in that class.

TABLE OF R AND \bar{Q} FOR EACH CLASS IN BOOKS FILE

<u>CLASS</u>	<u>R</u>	<u>AVERAGE QUOTA (\bar{Q}) OF ENTRIES</u>
Philosophy BC, BH, BJ	8	48

Sociology HM 1-221	9.1	57
Urban Planning HT 166-177	11.8	45
Post Confederation Ontario History F 5520-5547	14.6	40

COMMENTS ON THE USE OF A QUOTA

The SAP quota was intended to be a guideline for the number of entries to be selected from each table of contents and/or index. Because the quota formula does not take into account the length of the book or the quality of the index or table of contents, we are not completely satisfied that if applied, it will always be an accurate gauge for the number of entries to select.

For example, a book may contain a very lengthy and detailed index or table of contents, yet the actual page length of text may be comparatively small. Following the SAP formula, the book would receive a disproportionately high selection quota to the actual length of the book. Conversely, a book with a short index or table of contents, but long in length, would receive a small quota. The examples below illustrate these discrepancies:

	<u>QUOTA</u>	<u>Book pp</u>	<u>Table of Contents pp/lines</u>	<u>Index pp/lines</u>
Case "A"	8	354	2/16	2/59
Case "B"	417	280	1/14	54/112

We had to compensate for these discrepancies as we made our selections. The quota assigned each book was considered a "guideline." We also noted the average quota for the class and the length of the book being selected. For Case A above, the quota is 8 and average quota for that LC class (F) is 40. Taking into account the length of the book (354 pp) we would favor a selection closer to 40 than 8. For Case B, the quota is 417 and the average class quota is again 40. Considering the length of the book (280 pp) we would favor selection closer to 40 than 417.

Extremely high quotas, like the 417 above, were considered as "outliers" in our range of quotas and were reduced to a number no more than three times the size of the average quota for that class. Therefore, 417 was reduced to 120 (3 x 40).

For the most part, quotas averaged around 40 for each class. Actual selections for monographs with indexes alone or indexes and tables of contents also averaged around 40. The average number of selections for monographs with only tables of contents was about 15. These figures may serve as a useful gauge in determining your own formula for a quota, or in applying ours to the quantity of selection you can expect to make.

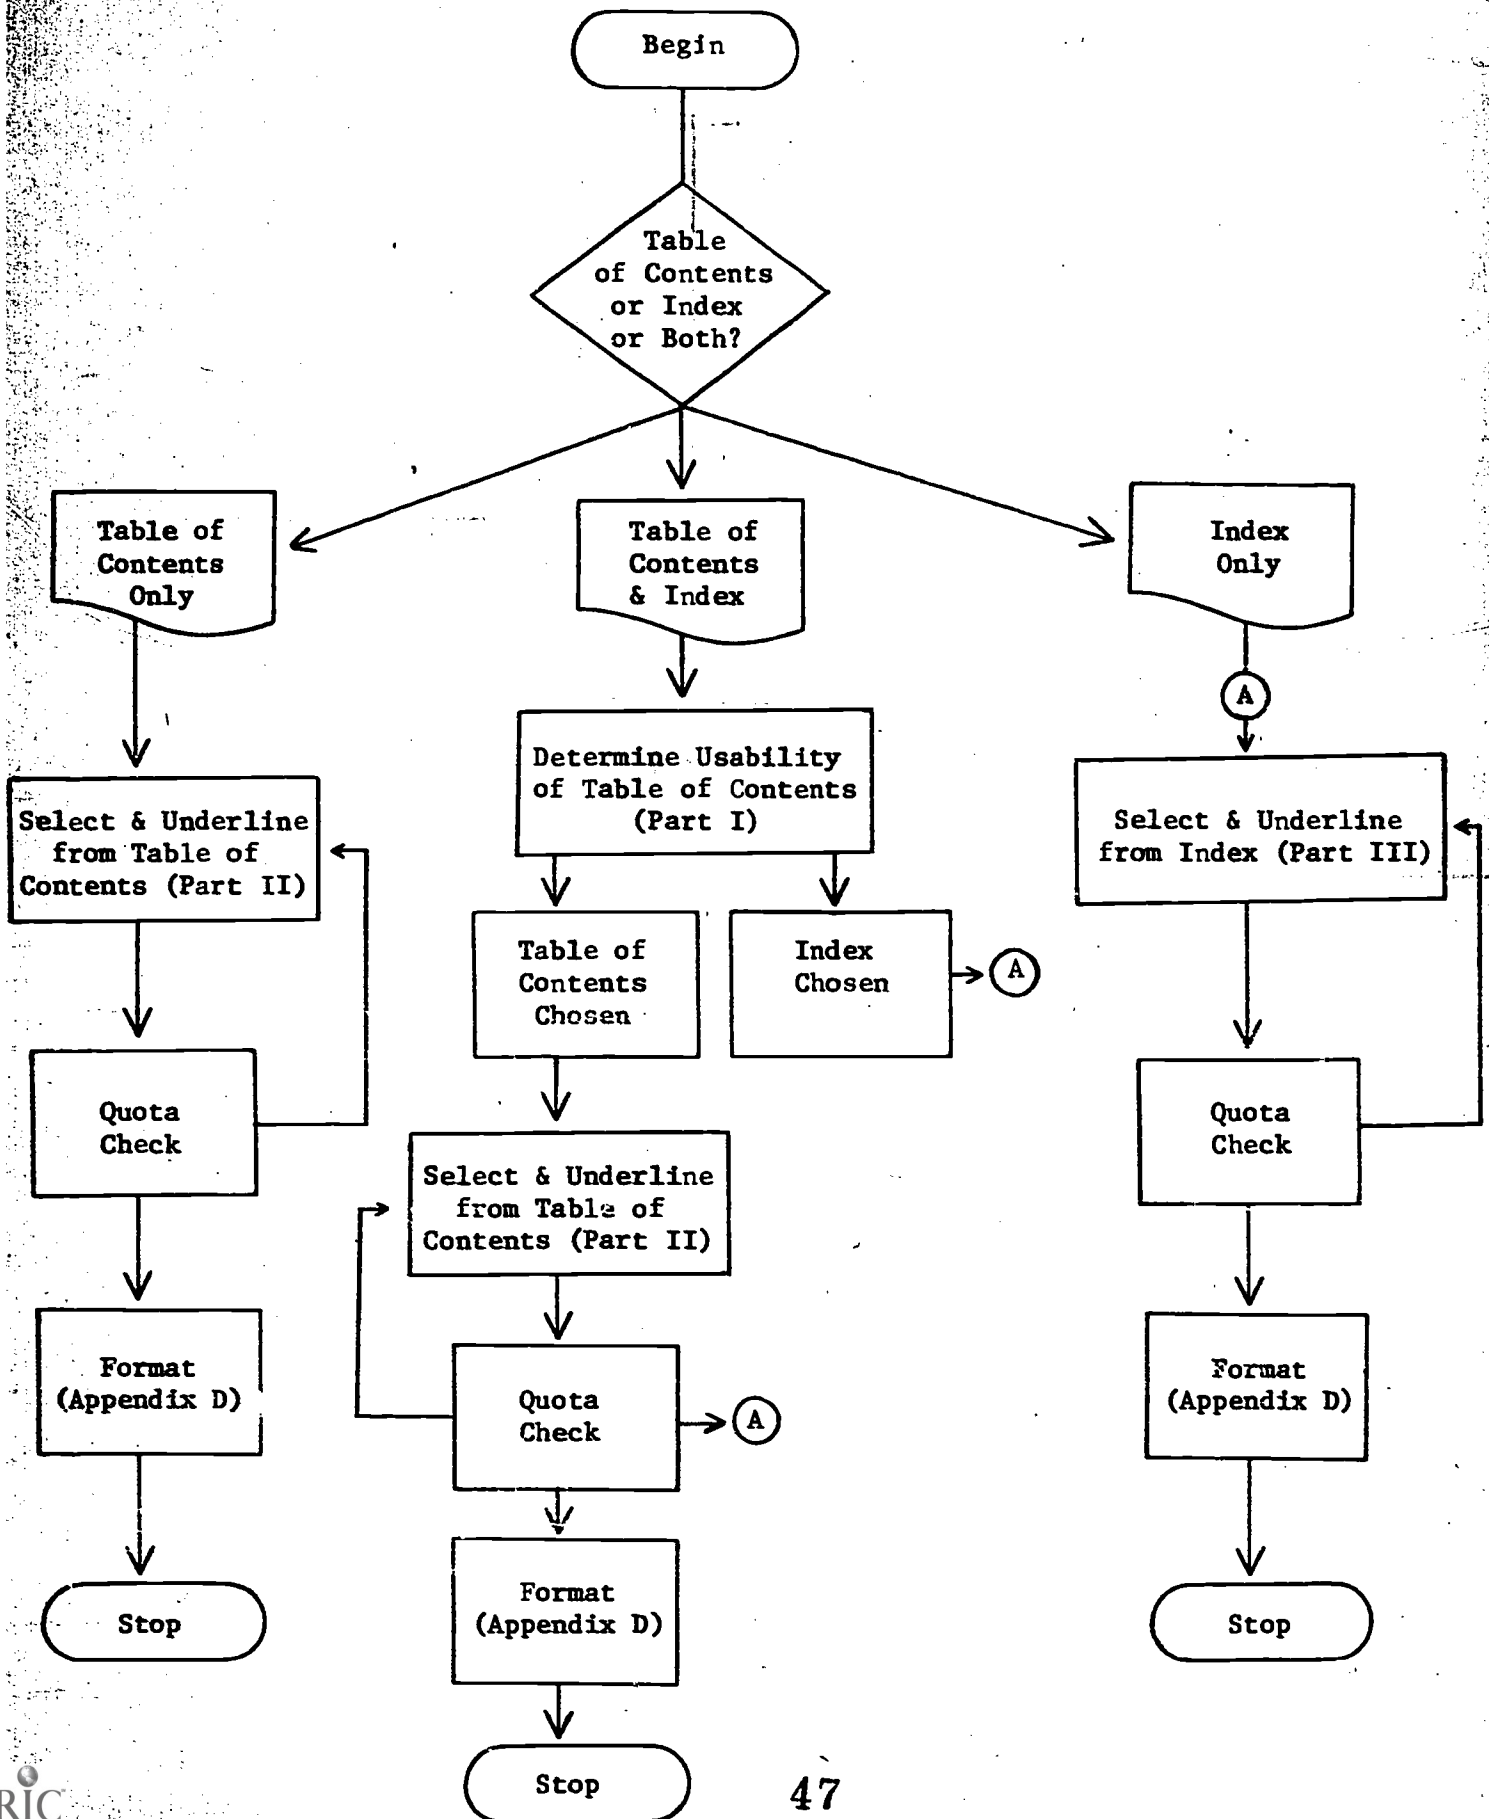

Whether you select more or fewer entries than the quota depends largely upon the quality of the index or table of contents in the book being selected. It is important to make selections which satisfy the rules and not to make selections merely on the basis of quantity.

In other words, we would recommend that, if after applying all the rules, the number of selections is still far below the quota, you should not go back over the same material and make additional selection of entries which do not satisfy the rules exactly. On the other hand, if after applying only some of the rules, the number of selections far exceeds the quota, you should not continue to make additional selections. Remember that the order of the rules ensures the selection of the most important entries first.

APPENDIX C

FLOW CHART OF THE SELECTION PROCESS

C

APPENDIX D

SAMPLES OF TABLES OF CONTENTS AND INDEXES: SELECTED AND FORMATTED FOR COMPUTER INPUT
(WITH ILLUSTRATION OF SOS* INPUT)

The following examples illustrate completed selection and formatting for books with tables of contents and indexes. In example 1, the table of contents does not meet the criteria for "usability" as it contains a significant amount of repetition and several "headline" headings. In example 2, the table of contents was chosen for selection, and in addition, selection was also made from the index. Index entries which were repetitive of selections in the table of contents were not selected.

As noted earlier, the style used for formatting entries will depend on the particular features of the retrieval system you will use for searching. The formatting style we used and illustrate here allows for the designation of individual entries and their relation to main headings or subheadings. The hierarchy of headings in tables of contents and indexes is designated by a hierarchy of codes:

@ ; / %

EXAMPLE:

Table of Contents (Portion)

@	Situational Determinants of Helping	13-76	
	• Social Determinants of Bystander Intervention in Emergencies		13
/	Bibb Latané and John M. Darley	13-28	
	• The Influence of Social Models on Helping		29
/	Harvey A. Hornstein	29-42	
	• A Skill for Charity		43
/	Jacqueline R. Macaulay	43-60	
	• Children's Reactions to Helpers: Their Money Isn't Where Their Mouths Are		61
/	James H. Bryan	61-76	
@	Social Norms and the Socialization of Altruism	77-154	

* A line-oriented text editing used on the DEC System-10

Helping Behavior - Addresses, essays, lectures

Contents

List of Contributors

Preface

Overview

① Jacqueline R. Macaulay and Leonard Berkowitz 1-12

② Situational Determinants of Helping 13-76

• Social Determinants of Bystander Intervention in Emergencies

1 Bibb Latané and John M. Darley 13-28

• The Influence of Social Models on Helping

1 Harvey A. Horowitz 29-42

• A Skill for Charity

1 Jacqueline R. Macaulay 43-60

• Children's Reactions to Helpers: Their Money Isn't Where Their Mouths Are

1 James H. Bryson 61-76

③ Social Norms and the Socialization of Altruism 77-154

• Legality and Harmfulness of a Bystander's Failure to Intervene as

1 Determinants of Moral Judgment

1 Harry Kaufmann 77-82

• Norms and Normative Behavior: Field Studies of Social Interdependence

1 John M. Darley and Bibb Latané 83-102

Quota = 25

Selections = 43 (all underlined headings and subheadings
 x are counted before formatting. Actual number of
 formatted selections is less) Contents

• The Socialization of Altruistic and Sympathetic Behavior: Some Theoretical
 and Experimental Analyses 103

1 Justin Aronfreed 103-126

• Moral Decision Making and Behavior 127

1 Shalom H. Schwartz 127-142

• The Self, Selfishness, and Altruism 143

1 Leonard Berkowitz 143-154

④ Guilt, Equity, Justice, and Reciprocation 155-240

• Transgression, Compliance, and Guilt 155

vii Jonathan L. Freedman 155-162

• Reactive Guilt and Anticipatory Guilt in Altruistic Behavior 163

1 Edna I. Rawlings 163-178

• The Exploited: Justice or Justification? 179

1 Elaine Walster, Ellen Berscheid, and G. William Walster 179-204

• The Desire for Justice and Reactions to Victims 205

13 Melvin J. Lerner 205-230

• An Attribution Analysis of Some Determinants of Reciprocating a Benefit 231

29 John Schorler 231-240

⑤ Naturalistic Studies of Altruism 241-282

• The Rescuers: Motivational Hypotheses about Christians Who Saved Jews
 from the Nazis 241

1 Perry Longon 241-250

• The Natural Socialization of Altruistic Autonomy 251

1 David Rosenhan 251-268

• Kidney Donors 269

1 Carl H. Fellner and John R. Marshall 269-282

APPENDIX E

EXPERIENCE WITH THE SELECTION MANUAL

A quota was necessary to control both the quantity of selection and the length of time necessary for the selection process. The first table below (E1) shows for each class and type (index or table of contents) the average number of selections and average time per case.

The second table (E2) gives our experience with the input process of keyboarding, proofreading, and computer preparation of the data base for later processing on SDC/Orbit (see Appendix F).

TABLE E1

AVERAGE NUMBER OF SELECTIONS & AVERAGE TIME
PER CASE FOR EACH CLASS & TYPE (TABLE OF CONTENTS OR INDEX)
